## **AIM-9M SIDEWINDER MISSILE SYSTEM**

### **EXECUTIVE SUMMARY**

This Navy Training System Plan (NTSP) has been developed in accordance with Office of the Chief of Naval Operations Instruction (OPNAVINST) 1500.76 to identify the life-cycle manpower, personnel, and training requirements associated with the AIM-9M Sidewinder Missile.

The Air Launch Aerial-Intercept Guided Missile (AIM)-9 series Sidewinder Missile is a short-range, air-to-air missile, whose mission is to detect, home-in, intercept, and destroy enemy aircraft. The AIM-9L missile evolved because of a combined Navy and Air Force effort to develop an air-to-air missile with a greater tracking rate and tighter turn capability than earlier series missiles. The missile featured an improved target detector that enhanced its effectiveness in short-range combat scenarios.

The AIM-9M missile evolution was driven by the AIM-9L Product Improvement Program (PIP) and developed into full-scale development, test, and evaluation program during Fiscal Year (FY) 78/79. The first AIM-9M variant, the AIM-9M-1, was fielded in FY 82. The Guidance Control Section (GCS) is the only component unique to the AIM-9M, which, prior to the AIM-9M-8, has three Navy variants: AIM-9M-1 or AIM-9M-3 (both use the same GCS), AIM-9M-4, and AIM-9M-6. The AIM-9M-8 contains the latest GCS variant that improves Navy warfighting capability over earlier AIM-9M variants to counter Infrared (IR) Countermeasures (CM) from aerial threats. The first AIM-9M-8 was fielded in FY95. The AIM-9M-10 is a limited retrofit to the current AIM-9M-8 inventory to support the F/A-18E/F Aircraft. It differs from previous versions by the replacement of wings and forward hanger.

The AIM-9M-8 upgrade affected only the AIM-9M GCS through the replacement of five circuit cards and the associated parent board. The AIM-9M-10 modification replaced wings and forward hanger. The new wings resist delaminating and the new forward hanger resists wear better than previous versions. Based on the nature of these changes, there was no impact to organizational or intermediate level maintenance with regard to manpower level or personnel skills. Intermediate level maintenance training was affected by a new tap test for wing delamination. Aircrew and operators are not impacted with regard to manpower level or personnel skills, but aircrew training was impacted by the additional missile status tones introduced in the AIM-9M-8. The Naval Air Warfare Center, Weapons Division (NAWCWD) China Lake, developed a familiarization video to introduce the new capability to squadrons, and PMA205 and NSAWC N7 (TOPGUN) developed Interactive Courseware (ICW) to support missile status tone training.

Existing skills are adequate to operate and maintain the AIM-9M-8 and AIM-9M-10. No new billets are needed to support the AIM-9M-8 or AIM-9M-10.

## **AIM-9M SIDEWINDER MISSILE SYSTEM**

### **PREFACE**

This Proposed Navy Training System Plan (NTSP) for the Air Launch Aerial-Intercept Guided Missile (AIM) -9M Sidewinder Missile was developed to update the previous version of AIM-9 Sidewinder Missile System Draft Navy Training Plan (NTP), A-50-8105B dated November 2001. The NTSP identifies the lifecycle Manpower, Personnel, and Training (MPT) requirements associated with the AIM-9M Sidewinder Missile System. It complies with Office of the Chief of Naval Operations Instruction (OPNAVINST) 1500.76 and the guidelines set forth in the Navy Training Requirements Documentation Manual (NTRDM), P-751-1-9-97.

The major changes and updates to this NTSP consist of:

- PART I Updated to reflect progress made during the fielding and operation of the AIM-9M-8, transition of Guidance Control Section depot repair capability from Letterkenny Army Depot to Tobyhanna Army Depot, the impact of the AIM-9X program's Government Furnished Equipment (GFE) requirements on the AIM-9M inventory, and the limited introduction of the AIM-9M-10 for the F/A-18E/F community.
- PART II Recalculated to depict current billet requirements of fleet support units through Fiscal Year (FY) 06.
- PART III Updated by recalculating chargeable student billets through FY06.
- PART IV Updated to refine the training and training logistics support requirements. This update included referencing and conforming to CNO's Non-Combat Expenditure Allowance (NCEA) Captive Air Training Missile/Dummy Air Training Missile CATM/DATM policy in the OPNAVINST 8010.99 Ordnance Stockpile Management Instruction.
- PART V Updated to reflect programmatic and technical schedule changes.
- PART VI Updated to include open action/watch items.
- PART VII Updated to reflect current Points of Contact.

PART I - TECHNICAL PROGRAM DATA

A. TITLE-NOMENCLATURE-PROGRAM.

- 1. **Title-Nomenclature-Acronym.** Sidewinder Missile System - Air Launch Aerial-Intercept Guided Missile (AIM)-9M.
- 2. **Program Element.** 64354N

B. SECURITY CLASSIFICATION.

- 1. **System Characteristics** ..... Secret
- 2. **Capabilities** ..... Secret
- 3. **Functions**..... Confidential

C. NTSP PRINCIPALS

- OPNAV Principal Official (OPO) Program Sponsor ..... CNO (N78)
- OPO Resource Sponsor..... CNO (N781C8)
- Marine Corps Program Sponsor ..... CMC (ASL-30)
- Developing Agency ..... PEO (T) (PMA259)

- Manpower and Personnel Mission Sponsor..... CNO (N12)  
NAVPERSCOM (PERS-21, PERS-4, PERS-404)
- Director of Naval Training ..... CNO (N7)
- Commander, Reserve Program Manager.....COMNAVAIRRESFOR (N3W)
- Marine Corps Total Force Structure ..... MCCDC (C-5352)

## D. SYSTEM DESCRIPTION

**1. Operational Uses.** The AIM-9M series Sidewinder Missile is a short-range air-to-air missile. The missile is used to track, home in on, intercept, and destroy enemy aircraft. The AIM-9M can be launched from a number of Navy, Marine Corps and Air Force aircraft platforms. This NTSP will only address the AV-8, F-14, F/A-18 and AH-1 platforms.

The AIM-9M-8/9 upgrade retrofitted Sidewinder missiles from the AIM-9M-1 and AIM-9M-3 to the AIM-9M-8 configuration for the Navy and the AIM-9M-9 for the United States Air Force (USAF). For the purpose of this NTSP, only the AIM-9M-8 is addressed. The change incorporated electronics processing modifications to improve the tracking capabilities against modern Infrared Countermeasures (IRCM).

The AIM-9M-10 upgrade retrofitted Sidewinder missiles from the AIM-9M-8 configuration to meet the requirements of the F/A-18E/F flight environment. Modifications included replacing the four fixed wings with wings that have improved resistance to delaminating and replacement of the forward hanger with a hanger that has improved resistance to wear. Sidewinder variants other than the AIM-9M-10 and its corresponding CATM-9M-27 are not authorized for loading on the F/A-18E/F model aircraft at this time.

**2. Foreign Military Sales.** The AIM-9 is approved for Foreign Military Sales (FMS) to various countries. For detailed FMS information, contact Program Manager, Air (PMA) 259.

## E. DEVELOPMENTAL TEST AND OPERATIONAL TEST

**1. Developmental Test Not Completed.** Not applicable (NA)

**2. Developmental Test Completed.** Developmental testing for the AIM-9M-8 was conducted during third quarter FY91 through third quarter FY92 by Naval Air Warfare Center, Weapons Division (NAWCWD) China Lake, California.

**3. Operational Test Not Completed.** Not Applicable (NA)

**4. Operational Test Completed.** Operational testing for the AIM-9M-8 began in the fourth quarter FY92 and was decertified in the first quarter of FY93. An operational test and readiness review was conducted in the second quarter of FY93, and operational testing resumed in the third quarter of FY93 and was completed in second quarter of FY94. The Operational assessment (OT-IIA) was conducted by VX-4. Operational evaluation (OT-IIB) was conducted by VX-5.

**F. AIRCRAFT AND/OR EQUIPMENT/SYSTEM/SUBSYSTEM REPLACED.** The AIM-9M-8 modification replaced circuit card assemblies in the electronics assembly of the guidance control section. AIM-9M-8 modifications were made to AIM-9M-1 and AIM-9M-3 missiles.

**G. DESCRIPTION OF NEW DEVELOPMENT.** The Sidewinder AIM-9M program is not a new development. Initial Operational Capability (IOC) was achieved in FY95. Both internal and external programs have impacted the program, however. Internally, the Guidance Control Section (GCS) depot function moved from Letterkenny Army Depot (LEAD) to Tobyhanna Army Depot (TYAD). Externally, the Sidewinder AIM-9X, the Joint-service Helmet Mounted Cueing System (JHMCS), and the F/A-18E/F Super Hornet programs include AIM-9M in various capacities. In the Sidewinder AIM-9X program, AIM-9M components are provided as GFE to be used/modified and built up with the AIM-9X guidance section to form the AIM-9X All-Up-Round (AUR) missile. The AIM-9X GFE requirement for its production line will begin to impact the AIM-9M inventory in FY06. The JHMCS program will provide another means to cue the AIM-9M to targets and threats and is anticipated to achieve IOC in FY03. The F/A-18E/F program will provide another aircraft platform to employ AIM-9M and is anticipated to achieve IOC in FY03.

**1. Functional Description.** The AIM-9M is a supersonic, air-to-air, guided missile that contains a passive Infrared (IR) homing target detector, proportional navigational guidance, and a torque-balance control system. The missile is propelled by a solid-propellant rocket motor. The AIM-9M is configured with an annular blast fragmentation warhead. Four wings provide aerodynamic lift and stability for the missile. Rollers on each wing reduce the missile roll rate and wing flutter. Airframe maneuvering is accomplished by four fins mounted in line with and forward of the wings and is activated by the torque-balance servo system. The AIM-9 Sidewinder Missile is comprised of the following components:

**a. Guidance Control Section (GCS).** All AIM-9M GCS are comprised of three major assemblies; a seeker assembly for detecting and tracking the target; an electronics assembly for processing detected target information; and a servo assembly that transforms electrical tracking signals to mechanical movement of the fins. An umbilical cable assembly provides the electrical interface between the missile GCS and the aircraft launcher. The umbilical cable also allows the flow of coolant from the LAU-7 to the missile GCS. AIM-9M GCS versions include the WGU-4A/B used in the AIM-9M-1 and AIM-9M-3, the WGU-4C/B used in the AIM-9M-4, the WGU-4D/B used in the AIM-9M-6, and the WGU-4E/B GCS used in the AIM-9M-8 and the AIM-9M-10. The WGU-4E/B GCS uses advanced technology that has evolved through the WGU-4D/B development, while expanding the potential of the IRCM detection circuitry and improving the missile's capability with respect to tactical IRCM deployment. The current tactical missile inventory consists exclusively of AIM-9M-8, of which 1,000 will be retrofitted to the AIM-9M-10 configuration for the F/A-18E/F community. A corresponding 250 CATM-9M-27 will be built-up to support F/A-18E/F aircrew training. Some WGU-4A/B and WGU-4D/B GCS

are still used in training missile configurations for live fire exercises, and will eventually be depleted through the annual AIM-9M NCEA.

**b. Target Detectors, DSU-15/B, DSU-15A/B, DSU-15B/B.** These target detectors are narrow-beam, active optical-proximity fuze systems designed to detect the presence of a target and initiate warhead detonation. Major components within the target detectors are a transmitter that emits four narrow fan-shaped beams through four lenses, a laser receiver that detects reflected energy, signal-processing circuitry to initiate detonation, and a thermal battery to provide internal power after missile launch. All target detectors are interchangeable in the AIM-9M design; however, only the DSU-15B/B and DSU-15/B are compatible with the Special Test Air Training Missile (NATM)-9M-2, NATM-9M-3, and NATM-9M-4 configurations, because they feature a communication tube that allows routing of the telemetry cable assembly.

**c. Safety-Arming Device, Mk 13 Mod 2.** The Safety-Arming (S-A) device is designed to arm the Sidewinder Missile at a safe distance from the launch aircraft and to detonate the warhead upon command from the Target Detector or GCS via contact fuze. The major components of the S-A device are an interrupted explosive train, acceleration arming device, and associated electrical switches. The S-A device has two windows: the forward window allows viewing of the launch latch to verify proper engagement, while the aft window allows viewing of the SAFE/ARM indicator.

**d. Warhead, WDU-17/B.** The warhead provides the destructive force of the missile. The warhead consists of a case assembly, two booster plates, high explosives, an initiator, and fragmentation rods. Exercise Warheads (smoke/flash), WDU-9A/B, are used in NATMs.

**e. Rocket Motor, Mk 36 Mods 7/8/9/10/11/13.** The rocket motor provides the propulsion for sustained flight of the missile. The rocket motors (Mk 36 Mod 7 through Mod 13) are solid propellant, high-thrust rocket motors that comprise the aft end of the AIM-9M. The Mk 36 Mod 13 rocket motor is used on the AIM-9M-10 configuration exclusively. It is a Mk 36 Mod 11 rocket motor retrofit with the new and improved forward hanger made with ALLVAC 13-8 wrought steel. A corresponding retrofit is made to the Mk 57 Mod 3 dummy/training rocket motor to create the Mk 57 Mod 4 dummy/training rocket motor, which supports the build-up of the AIM-9M-10 CATM (CATM-9M-27).

**f. Wings, Mk 1 Mods 0/1/2/5.** Four wings, attached to the aft end of the rocket motor, provide aerodynamic lift and stability for the missile during flight. Each wing has a rolleron assembly that is uncaged during free flight to provide roll (rate) stabilization. The Mk 1 Mod 5 is used on the AIM-9M-10 and CATM-9M-27 configurations exclusively. It is a Mk 1 Mod 2 wing retrofit with the new and improved cager assembly.

**g. Fins, BSU-32/B.** Four fins, attached to the GCS, provide a lift force on the forward airframe proportional to the input signal from the seeker, missile velocity, and altitude. The fins are electrically actuated and pneumatically controlled by a servo system in the aft portion of the GCS.

**2. Physical Description.** The physical and electrical characteristics of the Sidewinder missile are as follows:

**Table I-1. AIM-9M Leading Particulars.**

<b>Length:</b>	113.1 inches
<b>Diameter:</b>	5.0 inches
<b>Wing Span:</b>	25.2 inches
<b>Weight:</b>	188.2 pounds
<b>Power Requirements (external):</b>	115 VAC, 400 HZ and 28 VDC
<b>Power Requirements (internal):</b>	27 VDC Thermal Battery

**3. New Development Introduction.** The AIM-9M-8 missile was introduced into the Navy inventory through an AIM-9M retrofit program. The Navy began receiving WGU-4E/B GCSs in fourth quarter FY94 and had AIM-9M-8 AUR available for issue by second quarter FY95. The last AIM-9M-8/9 seeker production/retrofit contract completed deliveries in the second quarter of FY00. The Navy accumulated a total of 4,207 AIM-9M-8 AURs. The AIM-9M-10 missile will be introduced into the Navy inventory through an AIM-9M retrofit program and will be used exclusively on the F/A-18E/F model aircraft. Approximately 1,000 AIM-9M will be retrofit to the AIM-9M-10 configuration, while approximately 250 CATM-9M will be retrofit to the CATM-9M-27 configuration.

**4. Significant Interfaces.** The AIM-9M can be launched from a number of Navy and Marine Corps aircraft platforms. These include the AV-8, F-14, F/A-18 and AH-1, which all use the LAU-7 launcher to interface with the missile. Additionally, the F/A-18 can launch the AIM-9M using the LAU-127 launcher, while the F-14 can launch the AIM-9M using the LAU-138 launcher.

**5. New Features, Configurations, or Material.** The AIM-9M-8, features improved tracking capabilities against modern IRCM and provides new missile status tones (audio cues) to the pilot. The AIM-9M-10 features a forward hangar made of wrought steel (ALLVAC 13-8) versus previous cast steel (17-4) and an improved cager assembly in its wings in order to meet the environmental requirements imposed by the F/A-18E/F Aircraft.

## **H. CONCEPTS**

**1. Operational Concept.** The AIM-9M can be employed on several Navy and Marine Corps tactical aircraft. The AIM-9M has been integrated on F-14, F/A-18, and AV-8B fixed

wing aircraft and on the AH-1 rotary wing aircraft. The Sidewinder Missile is used during air-to-air combat evolutions. The missile is launched from an aircraft after target detection to home-in, intercept, and destroy enemy aircraft. The AIM-9M seeks and homes in on IR energy emitted by the target. When an IR-emitting source enters the seeker field of view, the electronics unit generates an audio signal. The pilot hears the signal through the headset, indicating that the AIM-9M has acquired a potential target. One method of cueing the AIM-9M to the target's IR energy source is referred to as boresight, whereby the missile is physically pointed toward the target via the pilot maneuvering the aircraft. The IR energy gathered by the missile seeker is converted to electronic signals that enable the missile to acquire and track the target up to its seeker gimbal limits. A second method of cueing the AIM-9M to the target's IR energy is the Sidewinder Expanded Acquisition Mode (SEAM). SEAM slaves the AIM-9M seeker to the aircraft radar. The aircraft avionics system can slave the missile seeker up to a given number of degrees from the missile/aircraft boresight axis. The missile seeker is slaved until an audible signal indicates seeker target acquisition. Upon target acquisition, a seeker interlock in the missile is released (uncaged) and the missile seeker begins tracking the target. The AIM-9M seeker will then continue to track the target. A third method for cueing the AIM-9M to the target's IR energy will be through use of the JHMCS. This method will allow the pilot to cue the AIM-9M seeker up to its seeker gimbal limits via helmet movement. The pilot can launch the AIM-9M anytime after receipt of the appropriate audible signal.

**2. Maintenance Concept.** The AIM-9 maintenance objective is to assure that AURs are available to fulfill commitments of operational activities, and to provide the means to restore unserviceable missiles to serviceable condition with minimal downtime. Maintenance functions are allocated to three levels of maintenance as defined in the Naval Ordnance Maintenance Management Program (NOMMP), OPNAVINST 8000.16 (series), which replaced the Naval Airborne Weapons Maintenance Program, OPNAVINST 8600.2 (series) in September 1999.

**a. Organizational-level.** Aircraft squadrons perform organizational-level maintenance. It is limited to visual inspections, launcher functional checks, replacement of launcher nitrogen receiver assemblies, loading and downloading of the missile, installation and removal of accessory items such as safety and protection devices, performance of the IR source test and tracking, and recording of captive flight time. Missiles requiring maintenance are returned to the intermediate maintenance activity for maintenance or disposition.

**b. Intermediate-level.** Weapons Department, Aviation Intermediate Maintenance Department (AIMD), Naval Airborne Weapons Maintenance Unit One (NAWMU 1) Guam, and Marine Aviation Logistics Squadrons (MALs) perform intermediate-level maintenance. It is limited to packing and unpacking, inspections, cleaning, paint touch-up, preservation, removal and installation of wings and fins, replacement of specified parts, and servicing of the nitrogen receiver. Tactical missiles and training components that are Beyond the Capability of Maintenance (BCM) of the intermediate maintenance activity are returned to AUR depot for repair or disposition.

### c. Depot

**(1) AUR Depot.** Naval Weapons Stations (NWS) Fallbrook, California, Yorktown, Virginia, and NAWMU-1 perform AUR depot level maintenance. They provide repair capability for missile components BCM at the intermediate level. Maintenance includes AUR packing and unpacking, AUR assembly and disassembly, missile processing, wings and fins maintenance and Sidewinder container maintenance.

**(2) Component Depot.** The Sidewinder program has implemented component depot-level repair capabilities at appropriate Designated Repair Points (DRP) within the joint services' missile maintenance activities. This approach takes full advantage of existing capabilities. TYAD is the DRP for the Sidewinder GCS. The Naval Surface Warfare Center Indian Head, Maryland, (NSWC-IH) is the DRP for the propulsion section. NWS Fallbrook and Yorktown are the DRPs for mechanical items such as wings, fins, and containers. Naval Weapons Support Center (NAWPNUSUPPCEN) Crane, Indiana, is the DRP for the Target Detector and the S-A device. TYAD achieved AIM-9M GCS repair capability in the first quarter of FY01. TYAD became the GCS repair depot as a result of a Base Realignment And Closure (BRAC) mandate, which moved the function from LEAD.

**d. Interim Maintenance.** The Sidewinder program is well beyond the Navy Support Date (NSD) for the AIM-9M. NAWCWD China Lake, Fleet Weapons Support Team (FWST) personnel provide technical assistance as required to organizational and intermediate activities. NAWCWD China Lake FWST personnel also provide On-the-Job Training (OJT) to organizational level and intermediate level maintenance personnel. Naval Strike Air Warfare Center (NSAWC) TOPGUN instructors provide operational updates and briefings for flight crews.

**e. Life Cycle Maintenance Plan.** The AIM-9M Sidewinder program has developed a Joint Post-Production Support Plan (JPPSP) that describes the AIM-9M life-cycle maintenance. The document is currently in draft form and is identified by the document number JPPSP-SW-001. Regularly scheduled maintenance for each Sidewinder AIM-9M missile, however, is determined by its last Maintenance Due Date (MDD) and the AIM-9M Serviceable-In-Service-Time (SIST). The AIM-9M SIST was increased from 36 months to 62 months in February 1996.

**3. Manning Concept.** The AIM-9M does not impact existing manpower requirements at Government organizational-, intermediate-, or depot-level activities. Seat factor, crew ratio, and total aircraft per squadron drive the pilot, Weapon and Sensor Operator (WSO), and Radar Intercept Operator (RIO) manpower requirements. The number of weapon pylons/stations per aircraft and total per squadron drive the load crew manpower requirements for United States Navy (USN) and United States Marine Corps (USMC) operational squadrons and Fleet Replacement Squadrons (FRS). Enlisted manning for USN and USMC intermediate maintenance

activities (Aircraft Carrier/Aircraft Carrier, Nuclear (CV/CVN), Naval Air Station (NAS), Marine Corps Air Station (MCAS), and MALS is based on the total assigned ordnance workload, and not on specific AIM-9M requirements. Skills required to support the AIM-9M are within the capability of existing Naval Enlisted Classification (NEC)s and Military Occupational Specialty (MOS)s. Refer to Part II for existing USN and USMC intermediate maintenance manpower requirements.

**a. Organizational-level Maintenance.** Loading an AIM-9M or a CATM-9M on Navy and Marine Corps aircraft requires five properly trained and certified ordnancemen. The particular rating, NEC and MOS for each aircraft are shown below:

**Table I-2. Organizational Maintenance Personnel**

Aircraft	Rating/NEC	MOS
AH-1		6531
AV-8		6531
F-14	AO 8345 or 8845	
F/A-18C/D	AO 8342 or 8842	6531
F/A-18E/F	AO 8341 or 8841	6531

**b. Intermediate-level Maintenance.** Three Aviation Ordnancemen (AO) are required to unpack, inspect, and deliver the AIM-9M or the CATM-9M to the flight line/flight deck. Weapons Department personnel with NEC 6801 (Work Center 700) can perform unpacking-packing evolutions for the Navy. MALS personnel with MOS 6541 can perform unpacking-packing evolutions for the Marine Corps. Two AOs are required to test, disassemble, assemble, and remove and replace components on Sidewinder-compatible launchers. AIMD personnel with NEC 6802 (Work Center 700) can perform launcher intermediate maintenance for the Navy. MALS personnel with MOS 6541 can perform launcher Intermediate maintenance for the Marine Corps.

**c. Depot-level Maintenance.** Depot-level maintenance manpower, both AUR depots and DRPs, is managed by the respective field activities on an annual basis. Each year, the upcoming year's maintenance workload is estimated and manpower levels are reviewed.

**4. Training Concept.** The AIM-9M training concept is divided into operator and maintenance training. Operator training is provided for aircrew personnel (pilot, RIO and WSO). The AIM-9M training concept for maintenance is divided into organizational and intermediate levels based on OPNAVINST 4790.2 (series) and OPNAVINST 8000.16 (series). Organizational-level maintenance training is provided to AO personnel shown in Table I-2. Intermediate-level training is provided to AO maintenance personnel with NECs 6801 or 6802, or MOS 6541.

Selected Reserve personnel may earn intermediate level maintenance qualifications by attending formal training at Naval Air Maintenance Training Group Detachments (NAMTRAGRU DET) and Naval Air Maintenance Training Units (NAMTRAU), providing quotas, funding, and students are available to attend the training. Specific guidelines are contained in NAVPERS 18068F Volume II, Chapter IV, Navy Enlisted Classifications.

The established training concept for most aviation maintenance training divides "A" School courses into two or more segments called Core and Strand. Many organizational-level "C" School courses are also divided into separate Initial and Career training courses. "A" School Core courses include general knowledge and skills training for the particular rating, while "A" School Strand courses focus on the more specialized training requirements for that rating and a specific aircraft or equipment, based on the student's fleet activity destination. Strand training immediately follows Core training and is part of the "A" School. Upon completion of Core and Strand "A" School, graduates attend the appropriate Initial "C" School for additional specific training. Initial "C" School training is intended for students with a paygrade of E-4 and below. This training is for personnel going to organizational level activities Career "C" School training is provided for E-5 and above personnel to enhance skills and knowledge within their field. Initial and career training is for personnel going to organizational level activities. Intermediate level "C" School training is not divided into initial and career.

**a. Initial Training.** AIM-9M-8 initial training was completed during FY95 and FY96. AIM-9M-10 initial training and materials are required for intermediate-level maintenance schools to incorporate the new tap test curricula required by the Mk 1 Mod 5 wings on the AIM-9M-10.

**b. Follow-on Training.** Training on the existing Sidewinder AIM-9M Missile is in place. Operator (aircrew) training courses were updated to include AIM-9M-8 Sidewinder information. Organizational level maintenance and intermediate level maintenance training courses required minimal updating to include the AIM-9M-8 nomenclature.

**(1) Operator Training.** Pilots, RIOs and WSOs are trained at the appropriate FRS for specific aircraft operation and weapons. Pilot, RIO and WSO skills in tactics and ordnance delivery are further enhanced at Strike Fighter Weapons School (SFWS), Strike Fighter Weapons and Tactics School, Atlantic (SWATSLANT), NSAWC, Marine Corps Air Weapons and Tactics School (MAWTS) 1 Yuma, Arizona, and through on-board proficiency training.

**(a) Training Devices.** Training Devices (TD) required for follow-on and proficiency operator training includes aircraft simulators and the CATM-9M. Also, AIM-9M assets are required for live-fire exercises, which are part of the annual NCEA. Aircrew training is heavily dependent upon the availability of CATM-9M assets, and because of the

importance of this TD, a Non-Nuclear Ordnance Requirement (NNOR) has been established. Refer to Part IV, element IV.A.2, for detailed information on CATM-9M requirements.

- **Weapons Tactics Trainer, Tactical Operational Flight Trainer, Weapon System Trainer, and Mission Flight Trainer.** Weapon Tactics Trainer (WTT), Weapon Systems Trainer, Tactical Operational Flight Trainer (TOFT), and Mission Flight Trainer (MFT) are platform-specific computer-based weapon system TDs (simulators). These TDs provide aircrew familiarization in aircraft operational procedures to include various sensor, stores and missiles employment. The various TDs for each aircraft platform that supports Sidewinder AIM-9M training are listed below.

**Table I-3. AIM-9M Capable Simulators**

<b>Aircraft</b>	<b>TD Name</b>	<b>TD Number</b>
AH-1W	WST	2F136
AV-8B	WST	2F149
AV-8B	WST	2F150
AV-8B	NAWST	2F150A
F-14B/A	WST	2F154
F-14D	WST	2F169
F-14D	MFT	2F153
F/A-18C/D	WTT	2E7
F/A-18C/D	TOFT	2F132A
F/A-18E/F	WTT	
F/A-18E/F	TOFT	

- **Captive Air Training Missile.** The CATM-9M is an inert, captive flight TD permitting realistic exercise of the AIM-9M GCS. Airborne operation of the CATM-9M provides the operator all interaction between aircraft and missile without expending the missile. CATM-9M may consist of a combination of tactical and training (inert) components or all training components. See Table I-4 for further CATM-9M configuration details. Aircrew training is heavily dependent upon the availability of CATM-9M assets, and because of the importance of this TD, a NNOR has been established (see OPNAVINST 8010.99). CATMs, although not considered expendable ordnance, are included on the Annual NCEA for allocation management purposes. The CATM training requirements are published in the applicable NTSP. Accordingly, NCEA distribution to all Major Claimants for CATMs is based on the established NTSP requirement for each weapon system. In cases where the total CATM inventory is less than the total requirement, the NCEA quantity is calculated on a fair-share percentage basis. In all cases, 100 percent of the CATM inventories will be allocated; hence, augment requests should not be submitted without compelling justification since augments will require reallocating from one claimant to another. Refer to Part IV, element IV.A.2, for detailed information on CATM-9M requirements.

Table I-4. Sidewinder CATM-9M Information

AIM-9 CONFIGURATION	NALC	CORRESPONDING CATM-9 CONFIGURATION	NALC	GCS COMMON TO BOTH CONFIGURATIONS	NALC
AIM-9M-1 or AIM-9M-3	PB55/ PV66  PC47/ PV67	CATM-9M-6 (slick) or CATM-9M-8 (W&F) or CATM-9M-1 (NAR'd) or CATM-9M-2 (slick) or CATM-9M-4 (W&F)	BWBS  BWBT  PC60  PC61  PV44	<b>NA</b> INERTED TACTICAL GCS WGU-4A(T-2)/B <b>NA</b> INERTED TACTICAL GCS WGU-4A(T-2)/B WGU-4A/B  WGU-4A/B  WGU-4A/B	1W11  1W11  PM55  PM55  PM55
AIM-9M-4	PV74	<b>NA</b>		WGU-4C/B	PM66
AIM-9M-6	PV76	<b>NA</b>		WGU-4D/B	PM67
AIM-9M-8	PV89	CATM-9M-12 (W&F) or CATM-9M-14 (slick)	PU70 PU71	WGU-4E/B WGU-4E/B	PM69 PM69
AIM-9M-10	WF57	<b>CATM-9M-27 (W&amp;F)</b>	WF55	WGU-4E/B	PM69

**(b) Training Aids**

- **Aircrew Interactive Courseware.** The AIM-9M Aircrew Interactive Courseware (ICW) is a component of the Strike Fighter Weapons and Tactics (SFWT) curricula, and is hosted on the Strike Fighter Training System (SFTS). SFWT and SFTS are two of three components of NSAWC's Strike Fighter Training Program (SFTP), which is primarily targeted at providing post-FRS training to Strike Fighter aircrew. The SFTS is a high-speed, wide area network, linking schools and squadrons together with standardized, Computer-Based Training (CBT) and ICW. Strike Fighter Tactics Instructors (SFTI), the third component of the SFTP, are trained by NSAWC N7 (TOPGUN) and administer the SFWT curricula within the squadrons. AIM-9M ICW was developed for the SFTS by NSAWC, PMA205 and PMA259, and was released in FY97. For detailed information on AIM-9M ICW (training aid) refer to element IV.B.2.

- **AIM-9M-8 Familiarization Video.** An AIM-9M-8 Familiarization video was developed by Naval Air Systems Command (NAVAIRSYSCOM) PMA259 and NAWCWD China Lake and used to support initial training. It was distributed to Fleet squadrons in FY94/FY95.

(c) **Courses.** The following table lists the applicable operator training courses. Additionally, Sidewinder lectures/briefs are maintained and provided by Tactics Instructors at NSAWC (TOPGUN), SFWS, and MAWTS 1. The AIM-9M-8 source material was incorporated in these courses with minimal impact. The addition of AIM-9M-8 material did not change student throughput or chargeable student billets, and, therefore, these courses do not appear in Parts II and III. See AH-1, AV-8 F-14, and F/A-18 NTSPs for course details. See Part I Section M for information on these related NTSPs.

**Table I-5. F/A-18 Operator Courses**

<b>COURSE NUMBER</b>	<b>COURSE TITLE</b>	<b>RFT DATE FOR AIM-9M-8</b>
D/E-2A-0601	F/A-18 Fleet Replacement Pilot Category 1	November 94

M23P3X1	AH-1 Fleet Replacement Pilot Modified Refresher	November 94

**(2) Initial Skills - Maintenance.** The AO “A1” School at NAS Pensacola, Florida provides AIM-9M initial skills training for the AO rating. The Dummy Air Training Missile (DATM), DATM-9M, is the TD required for AIM-9M initial skills maintenance training.

**(a) Training Devices.** The DATM-9M is physically representative of the AIM-9M. It is a TD that facilitates instruction and familiarization for organizational and intermediate level maintenance personnel in AIM-9M assembly, disassembly, loading, transportation, and stowage procedures and techniques. All components are training items (completely inert) except for wings, fins, and tactical umbilical cable. The DATM-9M-1 and DATM-9M-2 simulate both the AIM-9L and AIM-9M tactical missiles for training purposes and are not certified for flight. For detailed information on DATM-9M, refer to element IV.A.2.

**(b) Technical Training Equipment.** Technical Training Equipment (TTE) required includes:

- **LAU-7 SERIES Launcher.** The LAU-7 SERIES is used on the F-14, F/A-18, AV-8 and AH-1 aircraft. It is required to teach and practice AIM-9M release and control checks, AIM-9M loading, and launcher maintenance.
- **LAU-127 SERIES Launcher.** The introduction of LAU-127 SERIES launcher was driven by the development and introduction of the Advanced Medium-Range Air-to-Air Missile (AMRAAM), AIM-120. It is AIM-9M-compatible and its nitrogen receiver assembly is much smaller than those used on the LAU-7 SERIES and is used on the F/A-18 aircraft. It is required to teach and practice AIM-9M release and control checks, AIM-9M loading, and launcher maintenance.

- **LAU-138 Series Launcher.** The LAU-138 Series Bols Chaff launcher is used on the F-14 aircraft and is an AIM-9M capable launcher. It is required to teach and practice AIM-9M release and control checks, AIM-9M loading, and launcher maintenance.

- **AN/AWM-100.** The AN/AWM-100 test set is used on the LAU-7 SERIES to perform AIM-9M release and control checks. This test set will start to be replaced in FY03 by the AN/AWM-103, known as the Common Organizational-level Armament System Tester (COAST).

- **AN/AWM-103.** The AN/AWM-103, known as the COAST, will begin production in October 2002 at the rate of 25 per month. This launcher test set will replace several existing launcher test sets including the AN/AWM-100.

- **CNU-435/E AUR Container.** The AIM-9M AUR container is required to teach and practice unpacking/packing evolutions, as well as, container maintenance.

(c) **Courses.** The modification of the AIM-9M to the AIM-9M-8 configuration did not affect the training course content or course length at the AO A1 School, and therefore there were no changes in student throughput or chargeable student billets. These courses are listed for reference only and will not appear in Parts II and III of this document.

**Table I-9. Initial Skills - Maintenance Courses**

<b>COURSE NUMBER</b>	<b>COURSE TITLE</b>	<b>RFT DATE FOR AIM-9M-8</b>
C-646-2011	Aviation Ordnanceman Class A1 Common Core	On line
C-646-2012	Aviation Ordnanceman Class A1 Navy Difference Training	On line

(3) **Organizational-level Maintenance.** O-level Maintenance personnel are trained at the appropriate aircraft platform school. Strife Fighter Weapons School, Atlantic (SFWSL) and Strife Fighter Weapons School, Pacific (SFWSP) provides weapons loading and launcher release and control checks training for F/A-18. SWATSLANT provides weapons loading and launcher release and control checks for F-14. Naval Air Maintenance Training Marine Unit (NAMTRA MARUNIT) Cherry Point, North Carolina, provides weapons loading and launcher release and control checks for AV-8. HMT-303 provides weapons loading and launcher release and control checks for AH-1. Weapon loading skills are further enhanced through on-board proficiency training.

(a) **Training Device.** The TD required for follow-on and proficiency training is the CATM-9M. The CATM-9M is used for the AIM-9M Conventional Weapons Technical Proficiency Inspection (CWTPi).

(b) **Technical Training Equipment.** TTE required include:

- **LAU-7 SERIES Launcher.** The LAU-7 SERIES is used on the F-14, F/A-18, AV-8 and AH-1 aircraft. It is required to teach and practice AIM-9M release and control checks and AIM-9M loading.

- **LAU-127 SERIES Launcher.** The introduction of LAU-127 SERIES launcher was driven by the development and introduction of the AMRAAM, AIM-120. It is AIM-9M-compatible and its nitrogen receiver assembly is much smaller than those used on the LAU-7 SERIES and is used on the F/A-18 aircraft. It is required to teach and practice AIM-9M release and control checks, AIM-9M loading, and launcher maintenance.

- **LAU-138 Series Launcher.** The LAU-138 Series Bols Chaff launcher is used on the F-14 aircraft and is an AIM-9M capable launcher. It is required to teach and practice AIM-9M release and control checks, AIM-9M loading, and launcher maintenance.

- **AN/AWM-100.** The AN/AWM-100 is required to teach and practice AIM-9M release and control checks.

- **AN/AWM-103.** The AN/AWM-103, known as the COAST, will begin production in October 2002 at the rate of 25 per month. This launcher test set will replace several existing launcher test sets including the AN/AWM-100.

(c) **Courses.** AIM-9M is taught in the following organizational-level maintenance training courses. The modification of the AIM-9M to the AIM-9M-8 configuration did not affect the maintenance, release and control checks, or conventional weapons loading at organizational-level maintenance activities. Associated training course content and course lengths were not affected, and therefore there were no changes in student throughput or chargeable student billets. These courses are listed for reference only and do not appear in Parts II and III of this document. See AH-1, AV-8 F-14, and F/A-18 NTSPs for course details. See Part I Section M for information on these related NTSPs.

**Table I-10. Organizational-level Maintenance Courses**

<b>COURSE NUMBER</b>	<b>COURSE TITLE</b>	<b>RFT DATE FOR AIM-9M-8</b>
C-646-3893	AV-8B Conventional Weapons Loading	On line

C-646-9974	F/A-18 Stores Management Integrated Organizational Maintenance (Career)	On line
C-646-9361	H-1 Armament Repair Integrated Organizational Maintenance	On line

**(4) Intermediate-level Maintenance.** Intermediate-level maintenance training is available for USN and USMC AOs through the appropriate Maintenance Training Unit (MTU).

**(a) Training Devices.** The TD required for follow-on and proficiency training is the DATM-9M.

**(b) Technical Training Equipment.** TTE required include:

- **CNU-435/E AUR Container.** The AIM-9M AUR container is required to teach and practice unpacking/packing evolutions, as well as, container maintenance.

- **LAU-7 SERIES Launcher.** The LAU-7 SERIES is used on the F-14, F/A-18, AV-8 and AH-1 aircraft. It is required to teach and practice AIM-9M release and control checks and AIM-9M loading.

- **LAU-127 Series Launcher.** The introduction of LAU-127 SERIES launcher was driven by the development and introduction of the AMRAAM, AIM-120. It is AIM-9M-compatible and its nitrogen receiver assembly is much smaller than those used on the LAU-7 SERIES and is used on the F/A-18 aircraft. It is required to teach and practice AIM-9M release and control checks, AIM-9M loading, and launcher maintenance.

- **LAU-138 Series Launcher.** The LAU-138 Series Bols Chaff launcher is used on the F-14 aircraft and is an AIM-9M capable launcher. It is required to teach and practice AIM-9M release and control checks, AIM-9M loading, and launcher maintenance.

- **A/E37T-35 CRALTS.** A properly configured Common Racks And Launchers Test Set (CRALTS) is required to teach and practice LAU-7 SERIES intermediate maintenance.

(c) **Courses.** The modification of the AIM-9M to the AIM-9M-8 configuration did not affect the intermediate-level maintenance of the AIM-9M missile, therefore training course content and course lengths were not impacted. The AIM-9M Sidewinder is taught in the following intermediate-level maintenance training courses.

**Table I-11. Intermediate-level Maintenance Courses**

<b>COURSE NUMBER</b>	<b>COURSE TITLE</b>	<b>RFT DATE FOR AIM-9M-8</b>
C-122-3111	Air Launched Guided Missiles Intermediate Maintenance	November 94
C-122-3118	Strike Armament Intermediate Maintenance Repair	November 94
C-646-3105	Aviation Ordnance Intermediate Maintenance Technician	October 96
C-646-4108	Weapons Department General Aviation Ordnance Supervisor	October 95
C-646-4109	Weapons Department General Aviation Ordnance	October 95

Detailed information for each of the courses listed in Table I-11 follows.

<b>Title.....</b>	<b>Air Launched Guided Missiles Intermediate Maintenance</b>
CIN.....	C-122-3111 (part of D/E-646-7007)
Model Manager	MTU 4030, NAMTRAGRU DET Naval Station (NS) Mayport
Description.....	<p>This course provides training to the first tour Aviation Ordnancemen, Gunner's Mates and Torpedoman's Mates, including:</p> <ul style="list-style-type: none"> <li>° Basic theory</li> <li>° Safety precautions</li> <li>° Technical publications</li> <li>° Missile reporting procedures</li> </ul> <p>Upon completion, the student will have sufficient knowledge/theory of the Sparrow, Phoenix, Sidewinder, Sidearm, AMRAAM, Maverick, Harpoon, SLAM, HARM, Tow, Hellfire, Penguin AUR Air Launched Guided Missiles, Walleye Weapon System, Tactical Air Launched Decoy (TALD) and Air Nitrogen Purifier Units to perform, under close supervision, intermediate maintenance in the CV/CVN, LPH/LHA/LHD, NAS/MCAS working environment.</p>
Locations .....	<ul style="list-style-type: none"> <li>° MTU 4030, NAMTRAGRU DET, NS Mayport</li> <li>° MTU 4032, NAMTRAU, NAS Norfolk</li> <li>° MTU 4033, NAMTRAU, NAS North Island</li> <li>° MTU 4035, NAMTRAU, NAS Whidbey Island</li> </ul>
Length.....	11 days
RFT date .....	Currently available
Skill identifier...	AO 6801
TD/TTE .....	DATM-9M, CNU-435/E
Prerequisite .....	AO, GMG, TM, or Graduate of AO (ClassA1) School or equivalent or designated striker
<b>Title.....</b>	<b>Strike Armament Systems Intermediate Maintenance</b>
CIN.....	C-646-3118 (part of D/E-646-7001)
Model Manager	MTU 4033, NAMTRAU NAS North Island

Description.....	<p>This course provides training to Aviation Ordnance Technicians, including:</p> <ul style="list-style-type: none"><li>◦ Operational checkout procedures</li><li>◦ Corrosion control</li><li>◦ Troubleshooting procedures</li><li>◦ Periodic maintenance procedures</li><li>◦ Component removal, repair, replacement procedures</li><li>◦ Use of special tools and test equipment</li><li>◦ Use of publications</li><li>◦ Use of safety and administrative procedures applicable to aircraft armament equipment items</li></ul> <p>Upon completion of this course, the student will be able to perform work on aircraft armament equipment in the Aircraft Intermediate Maintenance Department environment under limited supervision.</p>
Locations .....	<ul style="list-style-type: none"><li>◦ MTU 4032, NAMTRAU, NAS Norfolk</li><li>◦ MTU 4033, NAMTRAU, NAS North Island</li></ul>
Length.....	65 days

TD/TTE .....	DATM-9M, CNU-435/E
Prerequisite .....	AO, GMG, TM, or Graduate of AO (ClassA1) School or equivalent or designated striker
<b>Title.....</b>	<b>Aviation Ordnance Intermediate Maintenance Technician</b>
CIN.....	C-646-3105 (part of M-646-7026)
Model Manager	MTU 4034, MCAS Cherry Point, North Carolina

Description.....	<p>This course provides training to USMC ordnance personnel, including:</p> <ul style="list-style-type: none"> <li>◦ Basic theory</li> <li>◦ Safety precautions</li> <li>◦ Technical publications</li> <li>◦ Missile/launcher reporting procedures</li> </ul> <p>Upon completion, the student will have sufficient knowledge/theory to be able to work on ordnance/armament in the MALS environment.</p>
Locations .....	MTU-4034, MCAS Cherry Point, North Carolina
Length.....	75 days
RFT date .....	Currently available
Skill identifier...	MOS 6541
TD/TTE .....	DATM-9M, CNU-435/E, LAU-7 SERIES, LAU-127 SERIES, A/E37T-35
Prerequisite .....	C-646-2011A Aviation Ordnanceman Common Core Class A1

**(5) Explosive Ordnance Disposal Training.** Explosive Ordnance Disposal EOD training is conducted at the Naval EOD School (NAVSCOLEOD) at Eglin Air Force Base, Florida. Additional advanced and specialized EOD training is provided by EOD Technical Evaluation Units (EODTEUs) at Fort Story, Virginia and San Diego, California.

**(a) Training Devices.** TDs required for EOD training are the Practical Explosive Ordnance Disposal System Trainer (PEST) and the Classroom Explosive System Trainer (CEST).

- **Practical Explosive Ordnance Disposal System Trainer.** A PEST is a full-scale model of the missile, containing inert versions of all explosive train components. The PEST possesses the same weight and center of gravity characteristics as the tactical missile. The PEST is used to teach and practice the missile's Render Safe Procedure (RSP). It is used in the identification line, the outdoor practice area, and the outdoor test area. There is no AIM-9M PEST, but its requirement has been satisfied by various inert components, e.g., rocket motor and warhead. For further details see element IV.A.2.

- **Classroom Explosive Ordnance Disposal System Trainer.** A CEST is an inert, cut-away model of the missile, displaying locations and types of explosive and hazardous materials, initiators, igniters, and fuze. It is used during classroom instruction to facilitate familiarization of the missile and its associated RSP. For further CEST-9M details see element IV.A.2.

**(b) Courses.** AIM-9M is taught in the following EOD training courses. The AIM-9M-8 RSP is the same as earlier AIM-9M variant RSPs. The AIM-9M-8 training material did not change student throughput or chargeable student billets, and, therefore, these courses do not appear in Parts II and III.

**Table I-12. EOD Courses**

<b>COURSE NUMBER</b>	<b>COURSE TITLE</b>	<b>RFT DATE FOR AIM-9M</b>
A-431-0011	Explosive Ordnance Disposal (EOD) Phase II (Navy)	November 94
A-431-0012	Explosive Ordnance Disposal (EOD) Phase II	November 94
G-431-0001	EOD Pre-deployment Team Training	November 94

**c. Student Profiles.** The following table lists the enlisted manpower and personnel classifications required to support AIM-9M. In many instances, AO personnel who will support AIM-9M will not possess the component NEC because they attained their primary NEC prior to the recent A School and C School changes. See Figure I-1 through I-9 for more information.

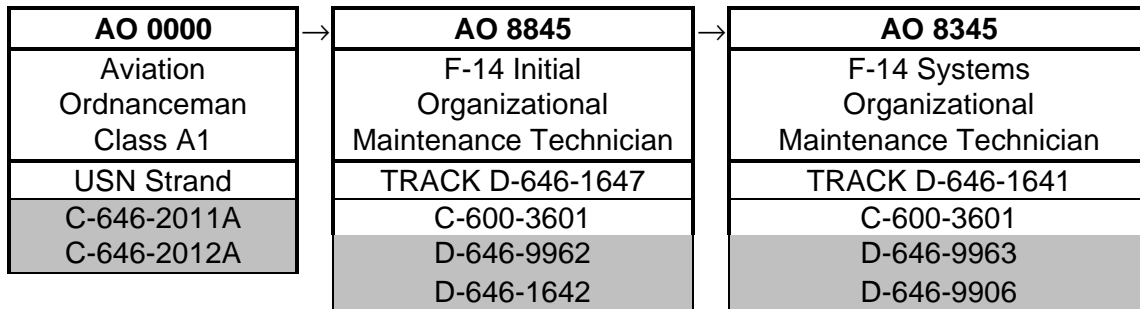

**Table I-13. AIM-9M Student Profiles**

<b>RATING and NEC or MOS</b>	<b>TITLE</b>	<b>COMPONENT NEC or MOS</b>
AO 8841	F/A-18E/F System Organizational Apprentice Maintenance Technician	AO 0000
AO 8341	F/A-18E/F System Organizational Maintenance Technician	AO 8841
AO 8842	F/A-18 Armament System Organizational Apprentice Maintenance Technician	AO 0000
AO 8342	F/A-18 System Organizational Maintenance Technician	AO 8842
AT 8842	F/A-18 System Organizational Apprentice Maintenance Technician	AT 0000
AT 8342	F/A-18 System Organizational Maintenance Technician	AT 8842
AO 8845	F-14 Initial Organizational Maintenance Technician	AO 0000
AO 8345	F-14 System Organizational Maintenance Technician	AO 8845
MOS 6531	Aircraft Ordnance Technician (AH-1)	6511
MOS 6531	Aircraft Ordnance Technician (AV-8)	6511
MOS 6531	Aircraft Ordnance Technician (F/A-18)	6511
MOS 6541	Aviation Ordnance Intermediate Maintenance Technician	6511
AO 6801	Air Launched Weapons Technician	AO 0000
AO 6802	Strike Intermediate Armament Maintenceman	AO 0000

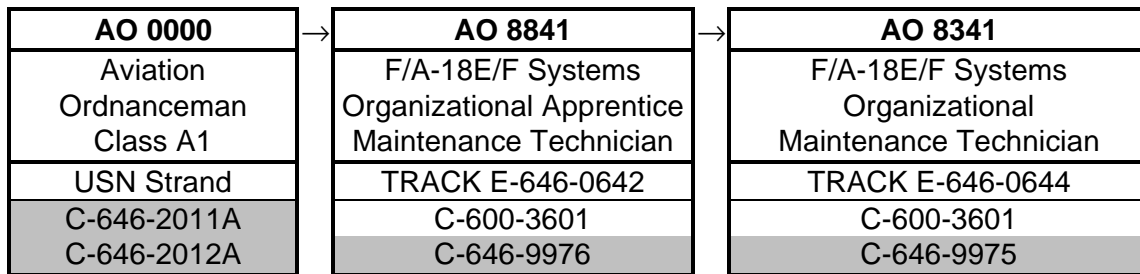

**d. Training Pipelines.** New training tracks were not required for AIM-9M-8. The following training pipelines and tracks correspond to student profiles listed above. These pipelines and tracks are based on the training system that is in place today, and may not reflect

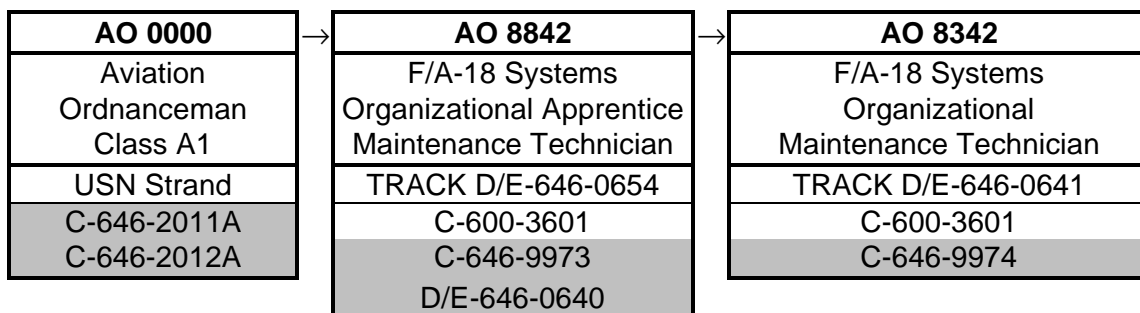

actual progressions for personnel who completed formal training prior to the recent A School and C School changes. Shaded courses contain AIM-9M content. Introduction of the AIM-9M-8 did not affect any organizational- or intermediate-level maintenance functions. Training tracks and associated courses are available in the Operational Evaluation Aviation Training Management System (OATMS). The following training tracks apply and are available in the OATMS.

**Figure I-1** F-14 Systems Organizational Maintenance Technician Career Progression

## I. ON-BOARD (IN-SERVICE) TRAINING

### 1. Proficiency or Other Training Organic to the New Development

**a. Maintenance Training Improvement Program.** Current planning is to adopt the Aviation Maintenance Training Continuum System (AMTCS) concepts to replace

Maintenance Training Improvement Program (MTIP). AMTCS is scheduled to begin full implementation for fleet deployment in Fiscal Year (FY) 02.

**b. Aviation Maintenance Training Continuum System.** AMTCS will provide career path training to the Sailor or Marine from their initial service entry to the end of their military career. AMTCS concepts will provide an integrated system that will satisfy the training and administrative requirements of both the individual and the organization. The benefits will be manifested in the increased effectiveness of the technicians and the increased efficiencies of the management of the training business process. Where appropriate, capitalizing on technological advances and integrating systems and processes can provide the right amount of training at the right time, thus meeting the CNO's mandated "just-in-time" training approach.

Technology investments enable the development of several state-of-the-art training and administrative tools: CBT for the technicians in the Fleet in the form of ICW with Computer Managed Instruction (CMI) and Computer Aided Instruction (CAI) for the schoolhouse.

Included in the AMTCS development effort is the Aviation Maintenance Training Continuum System - Software Module (ASM) which provides testing [Test and Evaluation (TEV)], recording [Electronic Training Jacket (ETJ)], and a Feedback system. The core functionality of these AMTCS tools are based and designed around the actual maintenance-related tasks the technicians perform, and the tasks are stored and maintained in a Master Task List (MTL) data bank. These tools are procured and fielded with appropriate Commercial off-the-shelf (COTS) hardware and software, i.e., Fleet Training Devices (FTD) - Laptops, PCs, Electronic Classrooms (ECR), Learning Resource Centers (LRC), operating software, and network software and hardware.

Upon receipt of direction from OPNAV (N789H), AMTCS is to be implemented and the new tools integrated into the daily training environment of all participating aviation activities and supporting elements. AMTCS will serve as the standard training system for aviation maintenance training within the Navy and Marine Corps, and is planned to supersede the existing MTIP and Maintenance Training Management and Evaluation Program (MATMEP) programs.

The Ammunition and Explosive Handling Qualification and Certification (QUAL/CERT) Program requires periodic, local QUAL/CERT events to be documented in a QUAL/CERT Record. These QUAL/CERT Records will be maintained physically at the local activity, but will be entered electronically into the ETJ for tracking purposes.

**c. Strike Fighter Training Program.** NSAWC, which includes TOPGUN (N7), SFWSL, SFWSP, and the SWATSLANT is developing post-FRS training at the squadron level for Navy Strike Fighter aircraft (F-14 and F/A-18). This post-FRS training continuum is known as the SFTP, and is composed of three equally critical elements: The SFWT curricula, the SFTI, and the SFTS. The SFWT curricula will be taught by each squadron's SFTI, who will be supported by the SFTS, a multimedia computer-based training system that will host CMI, CAI,

CBT and ICW. Aircrew weapons proficiency training will continue to be accomplished using existing methods: Academic, Simulator (WTT/Weapon Systems Trainer (WST)), CATM and/or embedded aircraft simulation, and NCEA; but capability ratings will be performance-based rather than completion-based, i.e., it will not be based simply upon completing the training events, but upon how well they are completed. Training events will be measured using defined metrics, and collectively these events will be evaluated to determine actual combat readiness, quantitatively (objectively) rather than qualitatively (subjectively). See the SFTP NTSP, N88-NTSP-A-50-9906, for more information.

## **2. Personnel Qualification Standards. NA**

## **3. Other On-Board or In-service Training Packages**

**a. Marine Aviation Training Management Evaluation Program.** Marine Corps on-board training is based on the current series of Marine Corps Order (MCO) P4790.12, Individual Training Standards System and MATMEP. This program is designed to meet Marine Corps, as well as Navy OPNAVINST 4790.2 (series), maintenance training requirements. It is a performance-based, standardized, level-progressive training management and evaluation program. It identifies and prioritizes task inventories by MOS through a front-end analysis process that identifies task, skill, and knowledge requirements of each MOS. MTIP questions coupled to MATMEP tasks will help identify training deficiencies that can be addressed with remedial training. (AMTCS is planned to replace MATMEP.)

**b. Conventional Weapon Technical Proficiency Inspection.** The CWTPI is a graded inspection administered by Fighter Wing (FTRWING) and Strike Fighter Wing (STRKFTRWING). It is governed by the policy and procedures established by each Type Commander (TYCOM). The inspection team is made up of SFWS instructors under the direction of the Wing Ordnance Officer. The CWTPI covers all areas of conventional weapon load and release, and control systems checks. The inspection evaluates the squadron's ability to wire-check, upload and download conventional ordnance correctly, use applicable publications, and place ordnance on its designated target. The squadron inspection is conducted annually, six months prior to deployment, or at the request of the squadron's Commanding Officer. All personnel, including squadron pilots, directly involved in the inspection, require a written examination. A 72-hour time limit is granted for the completion of the entire evolution. The final grade is an average score derived from the written exams, ordnance loads, wire checks, and the pilot's proficiency to deliver weapons on target. Pre-inspection training is provided by the appropriate SFWS or SWATSLANT, followed by the CWTPI. The CWTPI determines the need for further conventional weapons load training of squadron AO and Aviation Electronics Technician (AT) personnel at the appropriate SFWS.

**c. Marine Corps Combat Readiness Evaluation.** Marine Corps Headquarters schedules the USMC fighter and attack wings for a yearly Combat Readiness Evaluation. This is

part of the Marine Corps Combat Readiness Evaluation System. An entire Marine Corps activity is moved to another location to participate in war exercises and to be evaluated. Training is an on-going Marine Corps evolution that culminates with the Combat Readiness Evaluation. The evaluation determines the need for further conventional weapons load training of squadron personnel.

**d. Explosive Handling Qualification and Certification Program.** The Ammunition and Explosive Handling QUAL/CERT Program is implemented by OPNAVINST 8020.14 and MCO P8020.11. To minimize the probability of mishap, the potential for personnel errors are controlled through training (qualification) coupled with a management process designed to prevent inadequately trained personnel from performing ammunition and explosives jobs/tasks (certification). Aviation Ordnancemen are required to perform periodic, local QUAL/CERT events in order to be authorized to handle ordnance. Results of these QUAL/CERT events are documented in a hardcopy QUAL/CERT Record and kept on file by the local activity.

## **J. LOGISTICS SUPPORT**

**1. Manufacturer and Contract Numbers.** All domestic Sidewinder AIM-9M missile contracts have been completed.

**2. Program Documentation.** The Sidewinder Integrated Logistics Support Plan (ILSP) (ILSP-MS-059), dated 15 December 1993 was updated to include AIM-9M-8 information. Additionally, with the completion of domestic AIM-9M production contracts, the Sidewinder program has developed a JPPSP. The document is currently in draft form and is identified by the document number JPPSP-SW-001.

**3. Technical Data Plan.** Existing AIM-9 publications have been updated to include AIM-9M requirements. Because of the similarity between the AIM-9M and the AIM-9M-8, data pertaining to the AIM-9M-8 was incorporated into the existing manuals. Source data was acquired from NAWCWD China Lake. A complete list of all AIM-9 publications can be found in the Technical Manual List NA 01-AIM9-0.

**4. Test Sets, Tools, and Test Equipment.** The introduction of the AIM-9M-8 to Navy and Marine Corps operational units and activities did not require any new test sets, tools, or test equipment. The existing AN/DSM-152A Test Set received software modifications enabling it to recognize the AIM-9M-8 configuration. The modified test set is designated the AN/DSM-152B.

**5. Repair Parts.** The Naval Inventory Control Point (NAVICP), Mechanicsburg, PA and Defense Logistics Agency (DLA) provide supply support for the AIM-9M. This network is used to procure all AIM-9M-8 missile components, as well as components of earlier AIM-9M variants.

**6. Human Systems Integration.** The AIM-9M-8 and earlier configurations were fielded prior to establishment of Human Systems Integration (HSI) plans. Human factors did play a part in the development of additional missile status tones; suspending Operational Evaluation (OPEVAL) for a period to improve uniqueness of additional tones.

## **K. SCHEDULES**

**1. Installation and Delivery Schedules.** AIM-9M-8 has completed production and its inventory objective has been achieved. The AIM-9M-10 retrofits will begin in FY01 and continue through FY05.

**2. Ready For Operational Use Schedule.** All AIM-9M are fielded to operational units ready for operational use. Normal break out, assembly, and aircraft loading are required.

**3. Time Required to Install at Operational Sites.** NA

**4. Foreign Military Sales and Other Source Delivery Schedule.** AIM-9M-8 is still in production for various FMS countries. For further information contact PMA259.

**5. Training Device and Delivery Schedule.** The AIM-9M program has completed production and delivery of training devices that support up to the AIM-9M-8 configuration. As the mix of configurations in the tactical inventory has changed between AIM-9M-1/3, AIM-9M-4, and AIM-9M-6 to AIM-9M-8, a need for a corresponding change has been applied to the CATM inventory. Currently the CATM-9M inventory is comprised of approximately 65% AIM-9M-8 CATMs (CATM-9M-12) and 35% AIM-9M-1/3 CATMs (CATM-9M-4). 250 of these assets will be retrofit to AIM-9M-10 CATMs (CATM-9M-27). The Navy will maintain a total inventory mix of approximately 1100 CATM-9Ms. For more information, see section IV.A.2.

## **L. GOVERNMENT-FURNISHED EQUIPMENT AND CONTRACTOR-FURNISHED EQUIPMENT TRAINING REQUIREMENTS. NA**

**M. RELATED NTSPs AND OTHER APPLICABLE DOCUMENTS**

## **PART II - BILLET AND PERSONNEL REQUIREMENTS**

The following elements are not affected by the AIM-9M and, therefore, are not included in Part II of this NTSP:

### **II.B. Personnel Requirements**

#### **II.B.3. Foreign, Other Service, and Non-Military Personnel Annual Training Input Requirement**

**NOTE 1:** This section of the AIM-9M NTSP reflects intermediate-level maintenance billet and personnel requirements for the AIM-9M. It is a compilation of two Navy NECs, AO 6801 and AO 6802, and one Marine Corps MOS, 6541. AIM-9M operator billets are programmed through the applicable aircraft NTSP, e.g., F/A-18C/D NTSP, as are the AIM-9M organizational-level billets. The addition of the AIM-9M to the intermediate-level workload is only a small percentage of the required workload for those NECs and MOS. The NECs and MOS are not dedicated to the AIM-9M and, therefore, the overall training throughput for the NEC and MOS will remain the same, i.e., it accounts for the total NEC/MOS community, and not just activities receiving AIM-9M.

**NOTE 2:** All billets identified in this section are programmed through other NTSPs, e.g., F/A-18 NTSP, applicable CV/CVN Class Total Ship NTSP, or applicable Shore Activity Manning Documents. The activities and associated billets are listed to assist the weapons training community in identifying and managing training requirements throughout the development, production, and deployment of the AIM-9M.

#### IV.A.2. TRAINING DEVICES

**DEVICE:** Captive Air Training Missile, CATM-9M-4, CATM-9M-12 and CATM-9M-27 (for F/A-18E/F only)

**DESCRIPTION OF DEVICE:** The CATM is a captive flight training missile permitting realistic exercise of the AIM-9M seeker. Airborne operation of the CATM provides the operator all interaction between aircraft and missile without expending the missile. The CATM-9M-4 uses the WGU-4A/B GCS that is used in the AIM-9M-1/3 configurations. The CATM-9M-12 and CATM-9M-27 use the WGU-4E/B GCS that is used in the AIM-9M-8 and AIM-9M-10 configurations.

<sup>1</sup> Guidance from OPNAVINST 8010.99. CATMs, although not considered expendable ordnance, are included on the Annual NCEA for allocation management purposes. The CATM training requirements are published in the applicable NTSP (requirements are shown by squadron/activity, but allocated by claimant). Accordingly, NCEA distribution to all Major Claimants for CATMs is based on the established NTSP requirement for each weapon system. In cases where the total CATM inventory is less than the total requirement, the NCEA quantity is calculated on a fair-share percentage basis. In all cases, 100 percent of the CATM inventories will be allocated; hence, augment requests should not be submitted without compelling justification since augments will require reallocating from one claimant to another.

#### IV.A.2. TRAINING DEVICES

**DEVICE:** Captive Air Training Missile, CATM-9M-4, CATM-9M-12 and CATM-9M-27 (for F/A-18E/F only)

#### IV.A.2. TRAINING DEVICES

**DEVICE:** Captive Air Training Missile, CATM-9M-4, CATM-9M-12 and CATM-9M-27 (for F/A-18E/F only)

**DESCRIPTION OF DEVICE:** The CATM is a captive flight training missile permitting realistic exercise of the AIM-9M seeker. Airborne operation of the CATM provides the operator all interaction between aircraft and missile without expending the missile. The CATM-9M-4 uses the WGU-4A/B GCS that is used in the AIM-9M-1/3 configurations. The CATM-9M-12 and CATM-9M-27 use the WGU-4E/B GCS that is used in the AIM-9M-8 and AIM-9M-10 configurations.

#### IV.A.2. TRAINING DEVICES

**DEVICE:** Dummy Air Training Missile, DATM-9L/M

**DESCRIPTION OF DEVICE:** The DATM is physically representative of the AIM-9M. It is a training device to facilitate instruction and familiarization for transporting, handling, loading, and visual inspection procedures for organizational- and intermediate-level training purposes. The DATM is not certified for flight, and is designed for ground training use only.

#### IV.A.2. TRAINING DEVICES

**DEVICE:** Practical Explosive Ordnance Disposal System Trainer (PEST)

**DESCRIPTION OF DEVICE:** The PEST is a full scale model fabricated from actual hardware, having approximately the same weight and center of gravity as the tactical missile. The PEST is used for teaching Rendering Safe Procedures. For AIM-9M, the PEST requirement is satisfied by inert components from various Sidewinder missiles.

**NOVEMBER 2001**

**Prepared by:** NAVAIR PMA205-3J  
**Contact at:** (301) 757-8104  
**Date submitted:** 14 January 2002

**COMMENTS / RECOMMENDATIONS ON THE  
AIM-9M SIDEWINDER  
DRAFT NAVY TRAINING SYSTEM PLAN**

**TABLE OF CONTENTS**

Commander, Naval Air Force, Pacific (CNAP).....	1
Commander, Naval Education and Training (CNET) .....	4
Commander, Strike Fighter Wing, Pacific (CSFWP).....	8
Commander, Naval Air Warfare Center Training Systems Division (NAWCTSD).....	9
Commander, Naval Air Systems Command, PMA259/AIR-3.1.3E13 .....	12

**ACTIVITY NAME:** Commander, Naval Air Force, Pacific (CNAP)

**COMMENT:** List of Acronyms:

Add the following acronyms on page iii; AIM, AWB, AWC, BSU, DOLT, DSU, WGU, WDU.

**INCORPORATED:** AIM, AWB, AWC and DOLT added.

**REMARKS:** BSU, DSU, WGU and WDU not added – these are part of the nomenclature for wings and missile sections and it is not the accepted convention to spell them out.

**COMMENT:** Acronyms on page iv.

Delete the following NAMTRAGRU and NAMTRAGRUDET.

**INCORPORATED:** No

**REMARKS:** These acronyms are used in the document and the activities still exist.

**COMMENT:** Page I-2. Item-1. Third Para.

Is the AIM-9M-8 compatible with the F/A-18E/F? Needs to be addressed due to the upgrade retrofit of the new AIM-9M-10 that meets the requirement of the F/A-18E/F.

**Note:** The following platforms addressed as the AV-8, F-14, F/A-18, and AH-1, utilizing the AIM-9M-8 does not meet the requirement for the F/A-18E/F.

**INCORPORATED:** Yes.

**REMARKS:** The AIM-9M-8 is not authorized for loading on the F/A-18E/F model aircraft.

**COMMENT:** Page I-7 Para 3.b.

Next to last sentence, change “Intermediate” to read “intermediate”.

**INCORPORATED:** Yes

**REMARKS:** None

**COMMENT:** Page I-12: (2) (b):

Here and throughout, change LAU-7, LAU-127 and LAU 138 to read “series” vice “A/A”, etc. This will allow for changes, and better identify the launchers. (LAU-7A/A for example is no longer a valid asset).

**INCORPORATED:** Yes

**REMARKS:** None

**COMMENT:** Page I-16: In the “skill identifier”

The data implies the Air Launched Guided Missile Intermediate Maintenance course provides the NEC AO 6801. This is in error. In order to get an NEC you would have to complete the entire Track 646-7007, **Note:** Course C-122-3111 is taught within a track not as a stand alone course.

**INCORPORATED:** No

**REMARKS:** Skill identifier identifies the end result of training. The “CIN” column identifies C-122-3111 as part of the D/E-646-7007 NEC (6801) track.

**COMMENT:** Page I-21:

MOS 6511/MOS 6531 information needs to be placed with “Figure 1-4 on page I-22, or maybe move the date shown on the bottom of page I-21 to correct the problem.

**INCORPORATED:** Yes

**REMARKS:** The MS Word document was setup so that the table will not be split over two pages. When the document was converted to PDF file format, this feature was not carried over. Additional attention will be applied when converting the document in the future.

**COMMENT:** Page I-25: Para 3.b,

Implies the F-14 falls under the Strike Fighter Wing. The F-14’s have their own wing.

**INCORPORATED:** Yes

**REMARKS:** FTRWING and SWATSLANT added.

**COMMENT:** Page IV-7:

Training Activity Location, UIC: “NAS Yokosuka” should read “NAF Atsugi”, and change the UIC if applicable. Here and throughout the NTSP.

**INCORPORATED:** Yes

**REMARKS:** UIC is the same.

**COMMENT:** Page IV-9: VF-154

Is really in Japan, Atsugi and KITTY HAWK, may make a supporting difference.

**INCORPORATED:** Yes

**REMARKS:** None

**COMMENT:** Page IV-11:

Training Devices. Spot check of MTU-4033 and MTU-4035 indicate that the “on board” is not correct, 4033 has no AIM-9M, only AIM-9L, and 4035 has only one AIM-9M.

**INCORPORATED:** Yes

**REMARKS:** The following equipment is on-hand: MTU-4030, (2) DATM-9L; MTU-4032, (2) DATM-9L; MTU-4033, (2) DATM-9L; MTU-4034, (1) DATM-9L (1) CATM-9M; MTU-4035, (1) DATM-9M; AO “A” School, (4) DATM-9L.

**COMMENT:** Page IV-29:

Need to add the NA11-140.6 series manuals for fleet use. Here and throughout this NTSP.

**INCORPORATED:** Yes

**REMARKS:** None

**COMMENT:** Page IV-33:

Add NA11-140-6.3, to address the CATM and DATM weapons.

**INCORPORATED:** Yes

**REMARKS:** None

**COMMENT:** Page IV-33:

If the LAU-7 manual NA11-75A-54 is list, add the manual for the LAU-127 and the LAU-138 to the listing.

**INCORPORATED:** Yes

**REMARKS:** None

**COMMENT:** Page VII-1, VII-2:

Why is David Stokes a MAJ on VII-1 and a LCOL on VII-2?

**INCORPORATED:** Yes

**REMARKS:** None

**COMMENT:** Page VII-5:

Dennis Bobbitt’s e-mail address is incorrect. Should be “navair” vice “natec:.

**INCORPORATED:** Yes

**REMARKS:** None

**ACTIVITY NAME:** Commander, Naval Education and Training (CNET)

**COMMENT:** Global

Change reference to CBT, CAI and/or ICW to Interactive Multimedia Instruction (IMI) throughout the document. CAI, CBT, and ICW are all encompassed in IMI. CMI is an integral part of IMI in that it allows for User registration, tracking and scoring to mention a few.

**INCORPORATED:** No

**REMARKS:** The existing language conveys the necessary information to the level required to distinguish between the components of IMI.

**COMMENT:** Information

The Shareable Content Object Reference Manual (SCORM) is out in version 1.2. This document is an iterative one in that it will be modified as technology and capabilities change. Any organization involved in the development of IMI should become very familiar with the SCORM (available at [www.adlnet.org](http://www.adlnet.org)) as well as the contractors actually doing the work.

**INCORPORATED:** NA

**REMARKS:** None

**COMMENT:** Include a point of contact for IMI in the NTSP.

The NTSP should identify the organization responsible for Life Cycle Management (LCM) for IMI. Since these training products require the use of computers, equipment availability needs to be addressed. If existing workstations will be used, the NTSP should state this. If more computers are required this should be identified.

**INCORPORATED:** No

**REMARKS:** Multiple IMI and schools are discussed in this NTSP. Each activity has its own organizational structure to handle IMI. The APMTS and activity points of contact are already provided in Section VII.

**COMMENT:** I-H.4. TRAINING CONCEPT.

Studies show that time in training can be reduced by 30% generally and up to 50% in some cases with no degradation of knowledge acquired or skill performance. By developing Core subjects that cross many CINs, i.e., Basic Theory, Safety Precautions, Technical Publications and Missile Reporting Procedures in IMI it ensures standardization and ease of revision (revise one for one CIN and all CINs are revised). The same can be said for each of the Strand courses that are used in multiple CINs. IMI delivered in an Advanced Electronic Classroom with instructor will surely decrease the cost of the training over time and will allow for much of the course(s) to be exported to the worksite for refresher training if desired. The training material, including references, may be developed as an Interactive Electronic Technical Manual IETM and this allows for almost immediate update with all having access to the revised documentation. Again with proper design strategy the course(s) could be used for initial skill (performance)/knowledge, training, procedural training, and refresher training.

**INCORPORATED:** NA

**REMARKS:** This is a larger issue that must be addressed by CNET within its own chain of command. In many cases, the move to the electronic classroom is taking place; however, it is not explicitly discussed in this NTSP.

**COMMENT:** I-H.4.a. INITIAL TRAINING.

Is all training face-2-face or has IMI been incorporated into some delivery aspects of the training?

**INCORPORATED:** NA

**REMARKS:** Operator (pilot) training includes briefs (face-2-face) and ICW. Maintenance training currently only includes classroom and lab (face-2-face). The successor missile (AIM-9X) will include IMI for both operator and maintainers. See the AIM-9X NTSP for details.

**COMMENT:** I-H.4.b. FOLLOW-ON TRAINING.

Training is in place. No mention if IMI or IETMs is used.

**INCORPORATED:** No

**REMARKS:** See IV.B.2 and IV.B.3.

**COMMENT:** I-H.4.b. (1) TRAINING AIDS.

AIRCREW INTERACTIVE COURSEWARE. The comment on CBT and ICW appears as if they are 2 different delivery methodologies or applications when in fact they are the same. As stated above those 2 abbreviations have been replaced by IMI (which is the umbrella term for CAI, CBT, ICW, etc).

**INCORPORATED:** NA

**REMARKS:** The ICW mentioned is specific to the AIM-9M, while the discussion around CBT is general for the SFTS. CBT is not necessarily ICW. Some CBT is page turning without true user interactivity. CBT is more a “delivery methodology” without distinction of the level of interactivity used to convey knowledge and skills.

**COMMENT:** I-I.1.a. Maintenance Training Improvement Program.

Could be the basis to determine through analysis of the specific topics that must be taught those that would best be converted to IMI.

**INCORPORATED:** NA

**REMARKS:** None

**COMMENT:** Page i thru page vii

Has the title noted as AIM-9X.

**INCORPORATED:** Yes

**REMARKS:** None

**COMMENT:** Page I-4 paragraph 3

Is the only place in this NTSP that mentions the -9SW, (Is this NTSP for the -8 and -10SW or for the -8 and -9SW or is there just a misprint on this message?)

**INCORPORATED:** NA

**REMARKS:** The AIM-9M-8 is used by the Navy only, while the AIM-9M-9 is used by the Air Force only. The configurations are essentially the same, but differ by how they receive coolant to cool the IR seeker element – the Navy model receives external coolant from the launcher, while the Air Force model has an internal coolant tank in the guidance section. The AIM-9M-10 is used by the Navy only and is a configuration designed specifically for the F/A-18E/F model aircraft.

**COMMENT:** I-H.4.b (4) (c) Table I-11 DESCRIPTION

Paragraph needs to have LHD added.

**INCORPORATED:** Yes

**REMARKS:** None

**COMMENT:** Page 20 Table I-12

EOD course is labeled as an AIM-9X course title.

**INCORPORATED:** Yes

**REMARKS:** None

**COMMENT:** Page IV-1 paragraph IV.A.1

Training Activity NATTC AO “A” School item #5 has no status listed.

**INCORPORATED:** Yes

**REMARKS:** None

**ACTIVITY NAME:** Commander, Strike Fighter Wing, Pacific (CSFWP)

**COMMENT:** General

Need to add VFA-122 to the NTSP for a total 20 CATM-9's.

**INCORPORATED:** Yes

**REMARKS:** None

**COMMENT:** General

Need to remove VF-14/41 from the draft NTSP plan and add VFA-14/41 to the NTSP.

**INCORPORATED:** Yes

**REMARKS:** None

**COMMENT:** General

CATMs required will be 10 each.

**INCORPORATED:** NA

**REMARKS:** Most F-14 and F/A-18 operational squadrons require 10 CATM-9M; however, USMC F/A-18B/D model aircraft squadrons require 18 CATM-9M.

**COMMENT:** General

Do we at this time want to add a new statement that covers transitioning squadrons (VF to VFA) in the NTSP? This will be a never end item for sometime, just a thought.

**INCORPORATED:** No

**REMARKS:** Changes will be incorporated as they occur; however, squadrons that are planned to transition can be identified using a note or highlight.

**COMMENT:** Information

VFA-102 and VFA-103 start transitioning in FY03.

**INCORPORATED:** NA

**REMARKS:** None

**ACTIVITY NAME:** Commanding Officer, Naval Air Warfare Center Training Systems Division (NAWCTSD)

**COMMENT:** General

A review of Parts III (Training Requirements) and IV (Training Logistics Support Requirements) show a slight training impact based upon this NTSP. The additional missile status tones introduced in the AIM-9M-8 missile seem to have a very small impact *on* aircrew training. The strike fighter squadrons will be given a familiarization video to introduce the new missile capability. Interactive courseware to support missile status tone training will also be given to these squadrons. Existing skills are apparently adequate to operate and maintain the AIM-9M-8 and AIM-9M-10 missile. A small amount of training time will need to be taken within the existing curriculum to train these new features of the AIM-9M-8 missile at the strike fighter squadrons. No new billets are needed to support the AIM-9M-8 *and* AIM-9M-10 missile.

**INCORPORATED:** NA

**REMARKS:** None

**COMMENT:** Concerning training hardware cited on Page IV-2 in Section IV.A.1

At the NATTC AO "A" School, item number 005- the AN/AWM-100 is not stated as being "on hand. Is this hardware *now* available at NATTC AO "A" School or will it be in the future?

**INCORPORATED:** Yes

**REMARKS:** NATTC AO "A" School does not currently have the AN/AWM-100 on-hand; however, they will receive an asset when the AN/AWM-100 are modified as part of the F/A-18C/D Digital Wing Tip ECP. This is being coordinated through the AIM-9X program.

**COMMENT:** General

There needs to be a List of Tables presented. Tables 1-1 through 1-15 with their corresponding pages should be listed after the Table of Contents.

**INCORPORATED:** Yes

**REMARKS:** None

**COMMENT:** Acronyms

The following acronyms were not found in the acronym list, but were found in the text, they should be included in the Acronym List:

CM	Countermeasures
DLA	Defense Logistics Agency
NAVICP	Naval Inventory Control Point
NS	Naval Station
NTRDM	Navy Training Requirements Documentation Manual
TOPGUN	NSAWC N7
OPO	OPNAV Principal Official
OT-IIA	Operational assessment
OT-IIB	Operational evaluation

**INCORPORATED:** Yes

**REMARKS:** None

**COMMENT:** Acronyms

The following acronyms were found in the Acronym List but not defined in the text- they should be defined in the text:

AO	Aviation Ordnanceman
AT	Aviation Electronics Technician
CATM	Captive Air Training Missile
CCM	Counter-Countermeasures
CNO	Chief of Naval Operations
COTS	Commercial off-the-shelf
CV	Aircraft Carrier
CVN	Aircraft Carrier, Nuclear
ETS	Electronic and Technical Services
FREST	Fleet Replacement Enlisted Skills Training
ILSP	Integrated Logistics Support Plan
MAWTS	Marine Corps Air Weapons and Tactics School
MACAF	Marine Corps Air Facility
MCAS	Marine Corps Air Station
MOS	Military Occupational Specialty
MTU	Maintenance Training Unit
NALCIMS	Naval Logistics Center Inventory Management and Systems Division
NAMTRAGRU	Naval Air Maintenance Training Group
NAMTRAGRU DET	Naval Air Maintenance Training Group Detachment
NAMTRAU	Naval Air Maintenance Training Unit
NAS	Naval Air Station
NAVAIRSYSCOM	Naval Air Systems Command
NAVSCOLEOD	Navy EOD School
NEC	Navy Enlisted Classification
OPEVAL	Operational Evaluation
OPNAV	Chief of Naval Operations
PDA	Principal Development Agency
PMA	Program Manager, Air
SELRES	Selective Reserves
SFWS	Strike Fighter Weapons School
SFWSL	Strike Fighter Weapons School, Atlantic
SFWSP	Strike Fighter Weapons School, Pacific
TBD	To Be Determined
TD	Training Device
TTE	Technical Training Equipment
USMC	United States Marine Corps
USN	United States Navy
VMAT	Marine Attack Training Squadron
VMFAT	Marine Fighter Attack Training Squadron

**INCORPORATED:** Yes

**REMARKS:** FREST are currently called NAMTRA MARUNIT which has been added.

**ACTIVITY NAME:** Naval Air Systems Command, PMA259/AIR-3.1.3E

**COMMENT:** Information

Comply with CNO's NCEA policy on CATM/DATM requirements provided in OPNAVINST 8010.99 Ordnance Stockpile Management Instruction.

**INCORPORATED:** Yes

**REMARKS:** None

**COMMENT:** Page I-1 NTSP Principles:
